

UDAY C K

JUNIOR SOC ANALYST · PYTHON DEVELOPER

PANDAVAPURA, KARNATAKA
+91 8197240912
udayudaya.666@gmail.com
linkedin.com/in/uday-ck-n8
github.com/UdayCK8

CORE SKILLS

LANGUAGES

Python, Java, PHP, JavaScript,
HTML5/CSS3, SQL

WEB

Flask, Spring Boot, React.js, Bootstrap

DATABASES

MySQL, SQL, DBMS

ML / CV

Scikit-learn, OpenCV, Librosa, MFCC, SVM,
CNN, MLPClassifier, StandardScaler, Joblib

SECURITY

Threat Detection, IAM, Network Security,
Social Engineering, Phishing Analysis,
Secure Authentication

TOOLS

Git, GitHub, Docker, VS Code, IntelliJ,
Eclipse, PyCharm

CORE CS

OOP, Data Structures, OS, DBMS,
Networks, Cloud Computing

EDUCATION

MCA

ATME College of Engineering, Mysuru -
VTU

2025-Present · CGPA 8.39/10

BCA

PES College, Mandya

2022-2025 · CGPA 7.96/10

PUC - Computer Science

Vijaya Composite PU College

2020-2022 · 52.3%

SSLC

Vijaya School, Pandavapura

2019-2020 · 64.86%

CERTIFICATIONS

Tata Data Visualisation - 2026

Business framing, dashboard design and
executive insights.

Tata Cybersecurity/IAM - 2026

Identity and access management and
security strategy.

Mastercard Cybersecurity - 2026

Phishing simulation and awareness
training.

Deloitte Data Analytics - 2026

Dataset analysis and insight
visualization.

Deloitte Cyber - 2026

Login analysis, API risk identification
and reporting.

Networking - 2025

OSI/TCP-IP, subnetting, routing,
firewalls and VLANs.

HTML Essentials - 2025

Semantic HTML, forms and responsive
structure.

Python Internship - 2025

OOP, files, exceptions and MySQL
application development.

JavaScript for Beginners - 2024

DOM, events, to-do list, calculator and
quiz.

Python Essentials 1

Core Python programming concepts.

Python

Programming foundations and practical
application.

PROFILE

MCA student and entry-level Python/cybersecurity professional building secure backend and machine-learning systems. Delivered voice recognition, facial emotion detection, and OTP authentication projects plus hands-on IAM, phishing, analytics, and visualization simulations. Open to Junior SOC Analyst, Python, Backend, and Cybersecurity roles.

PROFESSIONAL EXPERIENCE

Python Developer | RankBook Learning & Software Solutions, Mysuru - Jan-Feb 2025

- Built a Python-MySQL Library Management System for issue/return, member tracking, and database management.
- Implemented CRUD operations, user authentication, OOP, file handling, and exception management.
- Maintained structured book and member records across issue/return workflows, then collaborated on debugging and performance improvements.

VIRTUAL EXPERIENCE

Data Visualization Participant | Tata Group - Aug 2026

- Framed business questions, identified stakeholder needs and selected chart types suited to leadership decision-making.
- Created a dashboard, organized the visual hierarchy and translated findings into a concise, executive-ready presentation.

Cyber Security Analyst Participant | Tata Group - Aug 2026

- Applied IAM concepts and cybersecurity best practices to assess a consulting-style access-management scenario.
- Connected access risks and recommended controls with business objectives, then documented and presented the proposed approach.

Cybersecurity Simulation Trainee | Mastercard - Aug 2026

- Designed a realistic phishing-email campaign and analysed simulation results to identify vulnerable teams and susceptibility patterns.
- Converted the findings into targeted awareness material covering phishing indicators, reporting actions, risks and mitigation steps.

Cyber Job Simulation Participant | Deloitte via Forage - Jun 2026

- Reviewed JSON login records, evaluated authentication evidence, classified attempts as secure or insecure and identified the vulnerable API.
- Produced a traceable classification list and a written security report explaining the evidence, vulnerability and recommended attention.

Data Analytics Simulation Participant | Deloitte via Forage - Jun 2026

- Analysed and compared four datasets to identify defective devices, recurring operational patterns and the most relevant findings.
- Selected and built charts that converted the technical analysis into clear, decision-ready insights for stakeholders.

PROJECTS

Voice Recognition System | Python · Flask · Librosa · ML · JavaScript - 2025

- Built a browser interface using MediaRecorder and a Flask backend to capture and recognise six voice commands in real time.
- Engineered 240-dimensional MFCC, Delta and Delta-Delta vectors with Librosa, applied StandardScaler, achieved 99% recognition accuracy and returned confidence scores.
- Saved the preprocessing and trained prediction pipeline with Joblib to support consistent browser-to-backend inference.

Secure Login System | Java · MySQL · JDBC · Jakarta Mail - 2025

- Developed username/password authentication with a SecureRandom-generated six-digit email OTP as a second verification factor.
- Integrated MySQL through JDBC PreparedStatement and Gmail SMTP through Jakarta Mail; added validation, exception handling and SQL-injection prevention.
- Structured the authentication flow with OOP so credential checking, OTP delivery, verification and database access remained clearly separated.

Real-Time Facial Emotion Detection | Python · CNN · OpenCV · Flask - 2024

- Developed a CNN-based application that processes live webcam video and uses OpenCV to locate faces frame by frame.
- Classified seven emotion categories in real time and exposed the prediction workflow through Flask.
- Connected webcam frames, face preprocessing and model output to display live emotion predictions through the web interface.
